

DFR

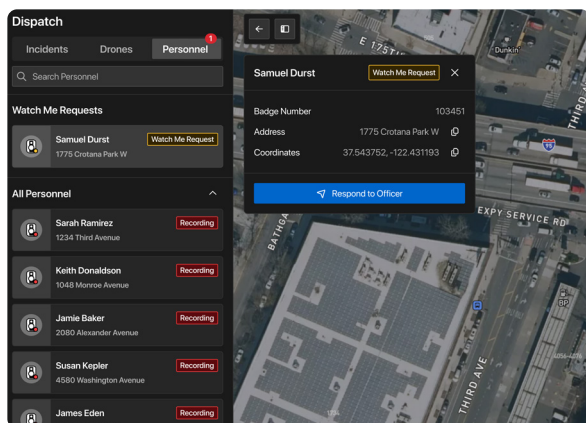

Skydio + Axon: The complete DFR solution

Launch and scale your DFR program in record time. Skydio X10, Dock for X10, and DFR Command integrate natively with Axon Air, Evidence, Fusus, and Dedrone – so every unit in the field has instant access to aerial intel when it matters most. All it takes is an Axon API key.

You protect us. DFR protects you.

When an officer needs help, seconds matter. Operators can view and monitor officer body-worn camera locations in DFR Command, allowing a remote operator to deploy a drone to an officer's real-time location in as little as 20 seconds.

- Officers can request the support of a Skydio drone at the push of the Livestream Request button.
- DFR Command proposes the best aircraft and flight path to the operator.
- Drone launches from the dock with one click and flies autonomously to the officer's location, avoiding obstacles while streaming video to all responders.
- AR street and address overlays in DFR Command ensure the operator always has the officer's location to guide backup and set perimeters.

Axon solutions are pre-integrated with Skydio DFR Command

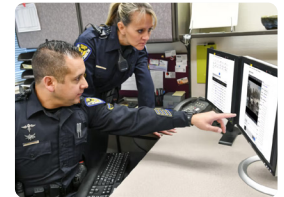

Live streaming video

Get real-time visibility on any scene. Live video streamed from Skydio X10 drones can be seen directly in Axon Air, Axon Fusus.

Evidence capture

All drone media is automatically uploaded to Axon Evidence after each flight. CJIS-compliant, DFR Command ensures a strict chain of custody and protects customer data.

Real-Time Crime Center

See the big picture down to the smallest detail. Skydio drone feeds are automatically routed into Axon Fusus, which can be easily viewed alongside all your other feeds to build a common operating picture.

Airspace awareness

View airborne traffic detected by radar with DedroneBeyond within DFR Command.

Program management

Automatically view flight records from Skydio drones in Axon Air, including pilot information, flight logs, captured data, and hardware stats.
